

The photographs below and on the succeeding page show work at a large Signature FBO facility in Hartford, CT. This work took place 11 years ago (July 1995). The floor still looks good today but to bring the floor back to an "exceptional" state, recoating has been planned for August 2006 with a new color scheme. The photographs will be followed in September with new photographs showing the updated hangar floor.

The "anchor" tenant for this large hangar is United Technologies (corporate aircraft department). The total area is over 64,000 square feet involving three hangars.
